SOYBEANS

Contract: March 2018

Exchange: CBOT, ECBOT

Symbol: SH18

Expiration Date: 14/03/2018

First Notice Day: 28/02/2017

Multiplier: 5000

We have to pay attention to the March 2018 Contract, which we will be able to trade until the end of February (Chart here below).

The forecast, as you know, is expecting a **general uptrend**, which can start immediately in January, hoping to see energy. If there is no energy, we will see a sideways movement, but **we should not see any downtrend** (*this is the forecast, but I do not trade the forecast, I trade the strategy! Let's be clear about it! To create a strategy, between the tools I use, there is also the forecast, which is not a strategy!*).

I am ready to see a new **up push starting in the first days of the year, or, in case of a Low, around January 16, 2018**. Then, the plan is to follow the uptrend, taking some profits when we have them, and letting the remaining to run. When we take part of the profits, we can reopen the same amount in case of pullbacks; the first days of February, if we see a short-term Low, can be another good time window where to accumulate for a new up push.

How am I planning to follow and trade what I am expecting from Soybeans? Here, we have to deal with the price map, first of all.

The most important long-term level is at 900-910, this is extremely important, and a simple rule suggests being always LONG above it and SHORT under it; this is also one of the reasons I want to follow the uptrend.

Looking at the specific March Contract, **right on these days, I see a powerful level in area 955**. If we want to use tight stops, we can set a strategy where we open

LONG positions above 955-956 with stops under 950. If we can use a wide stop, we can set the stop-loss order under 900, and be always LONG above it and FLAT under it.

If Soybeans pushes down until mid-January, no problem, we use our stops and we wait for that time window for buying at lower levels. Intermediate supports are at 937.50 and 920.

Summing up, I am expecting higher levels, and I am planning to open new LONG positions after the drop in December (which gave me a few little losses, nothing painful). We can use tight stop-loss orders using area 955, or using a wider stop under 900. The level 900 is very important, as I said during 2017 when Soybeans reached area 910 and bounced strongly upward.

For any question you have, please [contact us](#).

Good Trading!

Best Regards,
Daniele Prandelli
