INTRODUCTION

This is the 2019 Corn & Soybeans Price Forecast & Strategy Bulletin. I have removed the previous long part where we did review the results of the previous years. I am preparing a proper page, on internet, where you will be able to download all the previous Bulletins, the original Updates, and the Forecast Models. I think that the Bulletin is clearer in this way, where you do not have to scroll many pages to get what you paid for: the 2019 Forecast and Analysis.

If you want to see how the Annual Bulletins & Updates worked in 2018, you can visit the web page [Download Previous Annual Bulletins](https://iaminwallstreet.com/download-previous-annual-forecast-strategies-bulletins/#1544193908075-e6f92eaf-3db5) (<https://iaminwallstreet.com/download-previous-annual-forecast-strategies-bulletins/#1544193908075-e6f92eaf-3db5>), where you can download the original PDF documents and the Updates. To judge and understand my work, the best you can do is to have a look at how the Service worked in the past.

I hope you had the chance to read the document I have prepared to explain what the Annual Bulletin is. If not, please download it here <https://iaminwallstreet.com/wp-content/uploads/2018/11/Annual-Bulletin-You-have-to-understand-this-by-Daniele-Prandelli.pdf>

I have prepared this document to alert people that we live in a real world and this is not the place we accept *bullshit*. Let's define *bullshit*: useless information based on nothing that has been studied statistically; or even worst, *bullshit* is something we believe is perfect, infallible, but it is not.

My apologies if I sounded rude, but I wanted to have your attention on something very important for me:

- Do not expect to see the PFS Forecast Model working perfectly, forecasting every swing! The Forecast is just one of the tools we use, and just one of the tools you paid for, once you ordered the Annual Bulletin.
- We send Updates to better define the forecast and the strategy. Special events can always change the Market direction, because this is the reality! Even if you think that there must be always a cycle or a perfect forecast, do a favor to yourself: until you do not have any proof of it, accept always the uncertainty, because this is the reality.
- Our studies work most of the times, and this is a matter of fact (look at the previous works to believe it). However, *most of the times* does not mean *every time*, and it seems to me that several people do not understand it. We use stop-loss orders because we know we cannot always make right calls. Being aware of it, allows us to trade with consciousness, which means we are not afraid to close positions in loss, and we are not afraid to let the position to run when in profit.

- The Updates are important because we provide what the most important levels are in our opinion. We use these levels to place stop-loss orders and to know where we should let the position to run, for bigger profits. The Price Map, as the Forecast, works most of the times, but not every time. The purpose of trading is to place several trades during the year, to end up with a positive result at the end of the year. We may have some losses, but hopefully more profits. We cannot bet everything on every call, because sooner or later a wrong call will come!
- You may see some perfect forecasts, like 2018 Cotton or 2016 Corn; we work for that, and sometimes we are good enough to forecast every swing of the year with no mistakes at all; it does not mean that we have been better analysts than during the other years! It only means that during that year, the statistics produced the best result.

Working constantly with our forecast and strategies, since 2012 we are in profit with every Market we trade (about 9 Futures Markets); **our good performance is not the result of a good forecast, or a good price map or a good strategy; it is the result of all these tools together.** Discipline, as you always hear, is the hardest. We are here to make you disciplined too.

Summing up, please do not expect miracles, because we do not sell *bullshit*, but you do not have to believe in fairy tales too :)

If you have any question, you can always contact us. If you are looking for a deeper study, with a very active trading strategy, we provide the [Daily Report Service](https://iaminwallstreet.com/services/futures-markets-daily-report/) (<https://iaminwallstreet.com/services/futures-markets-daily-report/>), with Strategies every day to trade several Futures. This is a demanding Report, usually subscribed by professionals. However, we accept no more than 25 Subscribers to the [Daily Report Service](https://iaminwallstreet.com/services/futures-markets-daily-report/) and not more than 10 Subscribers to the [Weekly Report Service](https://iaminwallstreet.com/services/futures-weekly-report/) (<https://iaminwallstreet.com/services/futures-weekly-report/>).

2019 PFS CORN FORECAST BULLETIN

2019 CORN FORECAST MODEL

This is the 2019 PFS Forecast Model:

The model clearly suggests a similar pattern to the 2018. We can look at some details, even if, as you well know, we will provide Updates during the year, with precise levels to work with and the most favourite scenario.

Right now, we can state that Corn should remain sideways, or weak until February. In my opinion, the best buy opportunity will be around mid February/21 February or right at the end of February/beginning of March.

Then, we should see an up push working until the end of March/beginning of April. After the up push, new down push toward a Low in April. From the April Low, we should see a positive trend until June. If June is a High, a severe decline should start until July. July may be a tricky month: if Corn remains up until July, possible spike for a top and strongly down toward a Low in August; if Corn pushes down from June, with a Low in July, July becomes a buy opportunity for a bounce and intermediate top in August. As you can see, the summer may be quite choppy, and it will not be easy to follow every swing. We will follow the Market step by step during the Summer. From October, we should not see any uptrend, and the favourite path is a sideways or weak Market until the end of the year.

Please, let me say that Corn may be in a weak position, and the uptrend expected from February to June may not be so evident, showing a sideways/weak pattern instead of a positive pattern, and accelerating down from June. To avoid any misunderstanding, we will pay attention to the price map, looking for confirmations. And you know how do we do it?

WITH THE UPDATES!

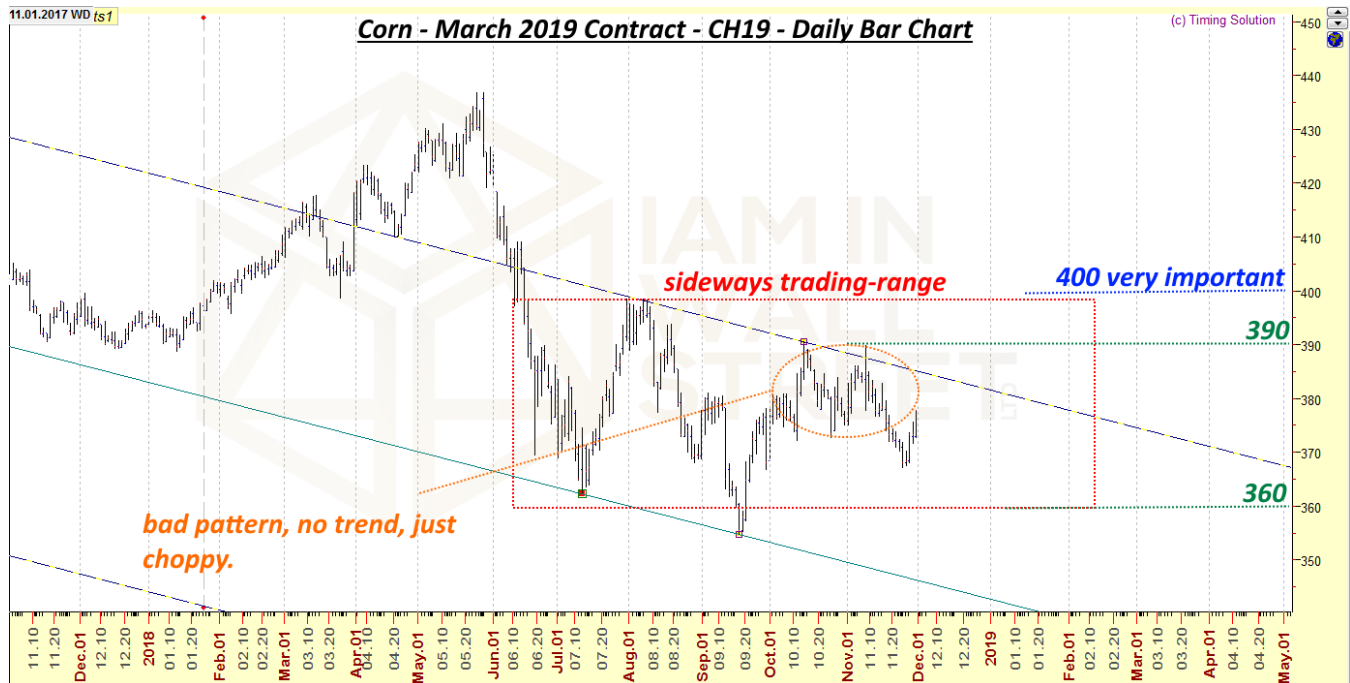

Please, be aware that the Bulletin is with ongoing Updates! The first Update will be sent right in the first days of January.

I have introduced this chart to better show where we should see the forces affecting the path of Corn during the year:

After June, there is a mixed phase, as I told you here above, and we will try to make it clear during the summer with the Updates. We have mainly two options, and it will depend on July, if it will be a High or a Low.

Let's have a look at the actual Price Map:

Corn is in a choppy phase, as you can see. Considering the time I am writing now, Corn is in gap up, after the G20 in Argentina. Corn has reached the trend line in area 384.75. I believe this is not a great time and a great price area where to trade, because Corn should remain choppy, going nowhere. Today, December 3, there is a possible change in trend (December 3-5), and the gap up should be recovered soon. Using the prices you see in the Chart, we can open SHORT positions protecting them with the Key Level at 390, and be always SHORT under it and FLAT above it (just for the following days). The other important level is at 360, and then we have the level 400, super important. At 383 there is an intermediate level with energy, but the volatility may be too low in December, and I think it is better we avoid using it, even if it may be a significant level.

You see the chart; trying to trade with an intermediate level can be very dangerous because Corn is just sideways! For this reason, I will mainly wait for January, and with the first Update of the year I will make clear my strategy. Taking a risk in December, with a sideways Market, in my opinion it is not wise.

Update Appointments of the Corn Bulletin

- January 5, 2019
- February 26, 2019
- April 25, 2019
- June 27, 2019
- August 29, 2019
- November 14, 2019

2019 PFS SOYBEANS FORECAST BULLETIN

2019 SOYBEANS PFS FORECAST MODEL

Here is the 2019 Soybeans PFS Forecast Model:

Let me say one thing: it is not going to be easy.

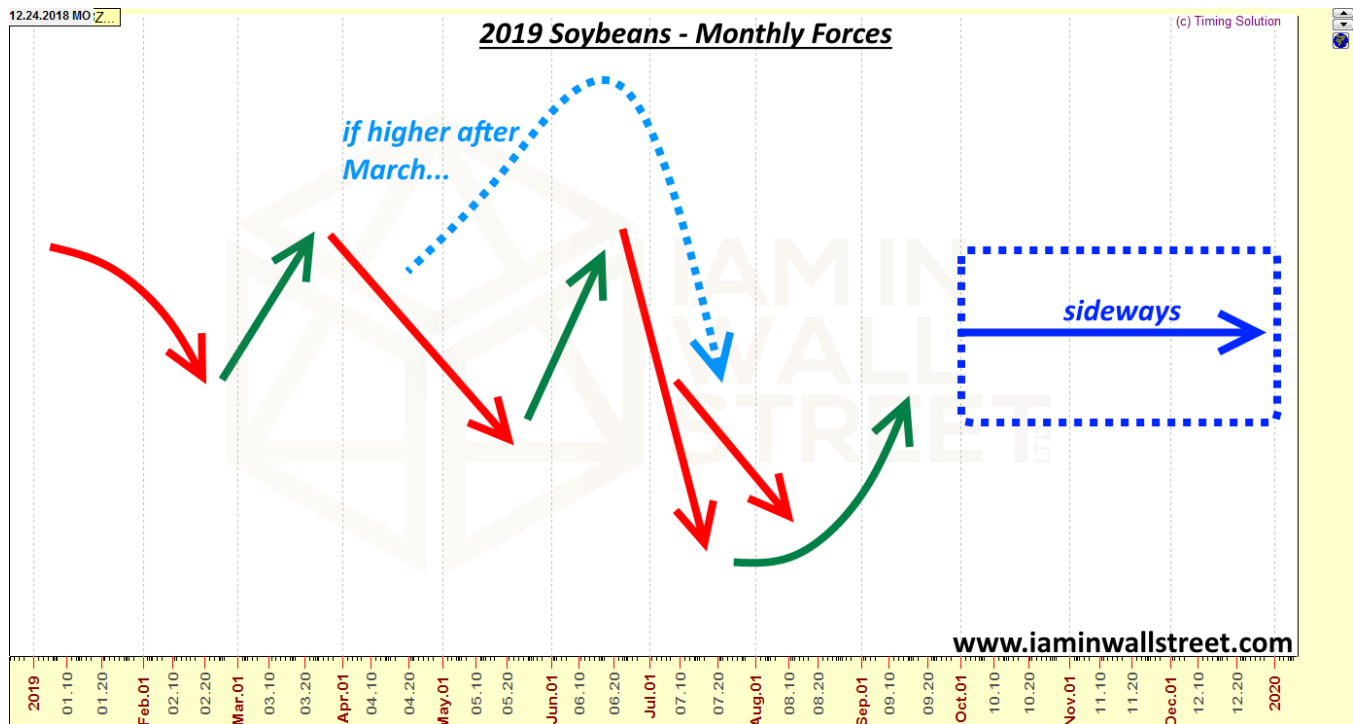

The trend of the first half of the year is not very clear. It is possible we will not see any uptrend at all, with a sideways or even negative trend since the first

weeks of the year. It will be very important monitoring the price map at the beginning of the year.

At the moment, the most favourite path of the year is:

- weakness starting immediately within the first two weeks of January
- we should see lower levels in February
- February is also a possible intermediate Low, where we see a new little up push toward an intermediate High in March. The High should be in the last 10 days of the month.
- From the High of March, a new downtrend should begin until May.
Attention, because probably here is where we understand if Soybeans are strong or weak! If we see higher levels in March, it is possible we see a continuation of the uptrend until June. If we see lower levels after March, we should see a Low in May, a little up push in June, and new down acceleration in June.
- In any case, June should be a sell opportunity, and we should see lower levels.
- Soybeans should hit a Low in July, but it may happen even in August, and then bounce until September.
- October, November and December should be boring months, where Soybeans work mainly in a sideways range.

This is a chart where I show the forces that should affect Soybeans swings during 2019. They do not show the trend, but the forces.

In December, I am not forcing any new trade (January 2019 Contract – SF19). I am expecting a pullback starting in the first days of December, and I will monitor also the time window December 18-20 for an intermediate change in trend. However, I am not planning to open LONG positions, and I will open SHORT positions only under 900. Also the level 908 is a good intermediate level, but we are seeing Soybeans moving around it, due to a low activity. That’s also why I prefer to not force any trade in December.

We have the next Key Level at 920, and then 934-936. As I said, I am not forcing any trade, and I will not use these levels to trade. Plus, the level 900 is very important, and I hope to follow the expected weak movement of January under this level, 900. The forecast does not suggest any new uptrend at the moment, but I do not fight it as long as Soybeans remain above 900.

Update Appointments of the Soybeans Bulletin

- December 31, 2018
- February 27, 2019
- April 25, 2019
- June 27, 2019
- August 29, 2019
- October 30, 2019

As I said, we will monitor our work, forecast and strategy during the year, through the Updates. See you on December 31, 2018, with the first Update of the Soybeans Market.

Interested in more Bulletins? Here is what we offer:
